

Appl. No.: 10/583,185

Amendments to the Specification:

Please delete the paragraph starting on page 4, line 11 and replace with the following replacement paragraph(s):

In order to hold module 2 in locking position in frame 1, module 2 and frame 1 have first complementary latching means 8, ~~10~~ 15 for holding the module in locking position in the frame. These means are made up of spring digits or tabs 8 on the frame and first stops ~~10~~ or stop elements 15 on module 2. The spring digits have a face 8a resting against stops ~~10~~ 15 which prevent withdrawal of the module. According to the example, two first stops are arranged on the lateral outer faces of the module and two digits are positioned on the inner faces of the frame facing said lateral faces.
